https://pinkbell.in/product.php - use this for product

https://www.wififalakatanetworks.com/# - use for all

https://www.wifiwani.com/ - use for all

you have to refer these all and make some simple and good looking website.

4. Remove the intro logo page – which is very slow loader
5. In my opinion i would say that you should completely redesign the whole website as its really slow, its not responsive, font family is also not correctly arranged, the color scheme is not best according to the logo, the main images is also not correctly edited and banner slider is also not with the perfect resolution...

6. create a new logo for you with the amazing color scheme, seo contented font family for the whole website, hd images will be uploaded. fully responsive and fast on all the devices,, plus it will be easy to navigate for everyone.
7. Need to configure contact page for enquiries.
8. Certifications we got, Galleries sections should be there.
9. Client logo should be there in index page.
